ABOUT ME

I'm a software developer passionate about backend development and systems architecture. With strong experience in .NET technologies, I'm driven by learning, performance, optimization, and delivering robust code.

PROFESSIONAL EXPERIENCE

Tech Consultant | Developer (OIDS)

Deloitte | 2025 - present

- Worked on a Banking Core System in NestJS, integrating Mambu and Mambu Payments (formerly Numeral) SaaS. Implemented orchestration logic for various banking requirements and situation (Nest.js).
- Developed an Agentic AI solution for a major Canadian Insurance Company, leveraging Python, Google ADK, and Gemini 2.5 Pro LLM to automate claim creation in ServiceNow and integration with GuideWire. Implemented an Agentic OCR pipeline for claim emails, enabling the AI to analyze data discrepancies prior to case registration. Took ownership of Kafka Topics (Consumers/Publishers) for DLQ management, prompt engineering, and MCP toolbox creation.
- Designed and built an Agentic Code Framework utilizing AWS. Orchestrated the spinning up of EC2 instances running the Claude SDK to automatically read requirements, generate tasks, develop code, commit, and test features. Managed the full lifecycle (state-controlled) via an AWS-hosted system (UI - React), involving MCP creation, a React frontend, and a Python backend.

Software Programmer | Full-Stack Developer

Urbinfor LDA | 2024 - 2025 (1 year and 8 months)

- Worked autonomously on the entire software development cycle on some projects
- Developed cross-platform applications using .NET MAUI
- Designed and built REST APIs with ASP.NET Core
- Created and maintained back-end services
- Diagnosed and resolved complex bugs and legacy issues, improving system stability and performance
- Applied architectural patterns like CQRS, DDD, Mediator pattern, and Dependency Injection to improve codebase maintainability.
- Integrated ML.NET models for product classification and predictive analytics.

Waiter

Restaurante Porão Limiano | 2019 - 2023

- Seasonal work (Summers,holidays,weekends)
- Improved my communication skills
- Gained responsibilities as a young student
- Worked in a dynamic and fast-paced environment

Though not engineering-related, the role sharpened my multitasking and communication skills under pressure .

EDUCATION

Polytechnic University of Viana do Castelo - ESTG

Master's Degree in Informatics Engineering
2025 – present

University of Trás-os-Montes e Alto Douro

Bachelor's Degree in Informatics Engineering
2020 – 2024

Secondary School of Ponte de Lima

Social Economics Sciences
2017-2020

TECHNICAL SKILLS

Languages

- C#
- SQL
- Java
- C ++
- C
- JavaScript
- Python

Software

- Visual Studio (& Code)
- Unity
- Git
- PostMan
- Claude
- Google Console Cloud (GCP)
- AWS Cloud

Other Proficiencies

- CQRS (Command Query Responsibility Segregation)
- MAUI .NET
- ML .NET
- API's REST (.NET)
- Google ADK
- Mambu (& Mambu Payments)
- Claude SDK

LANGUAGES

- English [B2]
- Portuguese [Native]

PERSONAL PROJECTS

- **GeoCaching Game**
  - A Unity-developed game, it is a location-based experience featuring a mini-game for discovering clues related to geocaches. (Unity; C#)
- **3D Engine**
  - This project was developed in C++ and serves as a 3D object loader, processor, and renderer. (C++)
- **Wholesalers**
  - A console application that functions as a server and client-side system for organizing and processing requests for ownership of broadband locations. Utilizing GRPC, Sockets, and RabbitMQ, it efficiently handles requests and responses. (C#)
- **Logging System Obersavibility System**
  - An API + Web system that register clients receives logs from their system's via api endpoints and permits queries on our system that will create alerts and when triggered will send a message on a webhook of the alert triggered (.NET, C#)
- **Bakery Sales - Business Inteligence**
  - A website created with a CSV file as data. This tool works as business assistance for decision-making (e.g., forecasting sales and production). It utilizes linear regression, multiclass classifiers, and other predictive models. (.NET; ML.NET; C#)
- **Rabbit MQ - NOSQL integration system**
  - This project integrated server - client communication based on RabbitMQ for pub-sub dynamics with integration with nosql databases. (C#)
- **SafeWalk**
  - Built an Android application in Kotlin utilizing device sensors (camera, accelerometer, etc) to detect falls and automatically initiate calls to medical services. (Kotlin)
